iTunes .MP3 Format Instructions

To use the USB port on the OPT-101 and the OPT-400 units, all music transferred onto a USB thumb drive (memory stick), must be .MP3 format.

iTunes users, make sure that your CD import settings are set to MP3 Encoder. To verify your settings please check the following:

- Open your iTunes Program
- Click the Edit > Preferences
- Under the General Tab, Click the "Import Settings" button
- Verify "import using" > MP3 Encoder.

By changing this setting, all FUTURE imports will now be .MP3. Any CDs that you have already imported to iTunes prior to changing this setting, will still be saved as the original file.

If the music previously imported was not .MP3:

Open your iTunes music library, right click on the song you wish to convert, click on "Create MP3 Version".
